

WHITELISTING AND BYPASSING FILTERS

Welcome! We're glad you have you on board.

Below are a few recommendations we have for bypassing spam filters and ensuring the phishing simulations are delivered properly.

1. Whitelist our server addresses:

64.191.166.196
64.191.166.201
64.191.166.198
64.191.166.200
64.191.166.199
54.80.160.189
54.88.176.92
34.201.193.97

2. Make sure it's not being sent to the spam folder or being filtered automatically by some external spam filtering system. If it is, and whitelisting doesn't work, the content of the email might have to change to lower the spam rating.
